

## Stop the Attack on Vermont's Drinking Water

Stop the attacks on America's drinking water. 1 in 3 Americans' drinking water sources are at risk now. That includes the drinking water for more than a quarter of Vermonters. **The Administration has a strong, commonsense plan to make clean water a priority by protecting the sources that feed the drinking water for more than 117 million Americans, including almost 200,000 Vermont residents.** If Congress blocks the proposal to protect clean water, at least 56% of Vermont's streams and 20 million acres of wetlands nationwide will continue to be at risk from pollution and destruction from development, oil and gas production, and other industrial activities. Stopping this proposal imperils drinking water sources, as well as the small businesses and communities that rely on clean water.

Vermont's Iconic Little River Reservoir, Waterbury, USGS

- **29% of Vermonters – more than 1 out of 4 residents** - get their drinking water from sources that rely on small streams currently vulnerable to pollution.
- **951 miles of streams** that feed into Vermont's drinking water sources are at risk. The Clean Water Rule would clarify protections for 52% of the stream miles in Vermont's Source Water Protection Areas, including intermittent, ephemeral, and headwater streams.
- **Thousands of acres of wetlands** that provide flood protection, recharge groundwater supplies, filter pollution and provide essential wildlife habitat are at risk.

## Rule Provides More Economic Benefits than Costs

- **This commonsense proposal restores, but does not expand, the historic coverage of the Clean Water Act.** EPA estimates that the proposed rule would provide **\$388 million to \$514 million annually in benefits** to the public, including reducing flooding, filtering pollution, providing wildlife habitat, supporting hunting and fishing, and recharging groundwater.
- **Protecting small streams and wetlands supports fish, wildlife and Vermont's vibrant recreational industry.** The U.S. Fish and Wildlife Service reports that in 2011, \$744 million was spent on wildlife recreation in Vermont, including \$131 million on fishing, and more than 512,000 people participated in these recreational activities in Vermont.
- **Vermont's thriving brewing industry relies on clean water.** Small Vermont breweries contribute almost \$2 million to our economy every year and support more than 2,000 jobs.

## Vermont Clean Water Rule Supporters

- **More than 2,000 Vermonters, out of more than 800,000 Americans expressed support for the rule.**
- Several conservation and environmental organizations, representing thousands of Vermonters.
- Vermont joined 34 other states in 2006 to urge the Supreme Court to uphold strong federal clean water protections and in 2003 opposed Bush administration efforts to roll back protections for small streams and wetlands.
